

**DEPARTMENT OF THE NAVY**  
**HARGREAVE-RASCH BIOMEDICAL INVESTIGATION**  
**DATE:** [Insert Date]

**MEMO FOR RECORD**

**SUBJECT:** Background Investigation Summary for [Individual's Name]

1. **Purpose:** To summarize findings from the preliminary investigation conducted on [Individual's Name] concerning eligibility for future employment.
2. **Background:** Per directive, an investigation was initiated to assess [Individual's Name]'s background and clearance eligibility. The subject is reportedly 32 years old, though evidence gathered indicates involvement or presence spanning back to the last century, raising inconsistencies in official records.
3. **Findings:**
  - **Contradictory Records:** Documentation reveals potential connections to figures associated with Hargreave-Rasch Biomedical founders Karl Ernst Rasch, Jacob Hargreave, and Walter Gould, dating to the late 19th and early 20th centuries in Tunguska, Russia, and Stillwater Bayou, Louisiana, USA.
  - **Associations in Louisiana:** Indications suggest the subject may have shared research aspects with Dr. Philip Huff Jones while in Louisiana, although concrete proof remains lacking.
  - **Employment Confirmation:** Verified employment as Systems Engineer/Site Reliability Engineer with Hargreave-Rasch Biomedical, primarily assigned to NanoSuit development. The subject collaborated with Nathan Gould indirectly in support of operator "Prophet" (KIA) and "Alcatraz" but reportedly lacked direct involvement in biological research.
4. **Conclusion:** Given the current ambiguity and resource constraints, a definitive conclusion is not feasible. The subject appears eligible for clearance with a recommendation for continued monitoring.
5. **Recommendation:**
  - Grant clearance conditionally, with ongoing observation.
  - Communicate selective findings to the future employer for potential insight or future intelligence gathering.
6. **Additional Resources:** Refer to uploaded information in the secured portal for supplementary data on the investigation.
